SICSA DATACENTER OBJECTIVES

Goal

SICSA is an innovative Information and Communication Technology company that is committed to developing a new market space within the country of Haiti and to making a strong entry in a rapidly expanding global marketplace for cloud computing.

Strategy

We plan to be positioned as the natural choice for companies or organizations with large or complex networks and high monthly maintenance costs for companies whose current operations and/or growth projections require more robust, flexible and secure networks.

Partners

We are seeking to partner with a company that

i. has communication towers strategically placed around the country which would enable us national coverage for our services, and/or
ii. the appropriate communication licenses under which we can offer our data services

Our Services

i. Virtualization Services
ii. Colocation Services
iii. Cloud Computing
    a. Application as a Service
    b. Infrastructure as a Service

Our advantages

i. We will be the only company in Haiti at present with that capability (i.e. A network infrastructure that offers unprecedented reliability, performance and security)
ii. We can significantly reduce the cost of operations for our target clients by eliminating the high telecommunication costs associated with point-to-point wide area network connections
iii. Offer a full range of new services available only on robust IP Networks

Proposal

i. Where partner has towers without license:
    a. Establish agreement to pay for use of towers
    b. Seek joint venture opportunities for future collaboration
ii. Where partner has both towers and license
    a. Establish profit sharing agreement
